

Docobo™

towards a better quality of life

Docobo: Delivering ground-breaking innovation in health and care technology

There has been a tremendous amount of innovation achieved at pace in the last 18 months in response to the pandemic, none more so than in healthcare. The digital offering is now real and accepted within the patient experience. The opportunity is immediate to embed this new relationship between technology and patient care. Docobo has been at the forefront of this change, building on from its 20 years of supporting the NHS to achieve digital transformation and is uniquely positioned to support new and emerging ICSs through:

- Improving the quality of people's lives
- Enhancing care through digital means
- Freeing up clinicians' times
- Driving evidence led decision making
- Reducing costs
- Managing patient risk

CASE STUDY:

In primary care, Docobo solutions reduced GP and practice workload. Monitoring and communicating with patients at home and in care homes is reducing visits to care homes, reducing demand for GP appointments and enabling timely interventions through proactive care.

CASE STUDY:

In Liverpool, prior to the pandemic, the monitoring hub reached a ratio of one monitoring nurse to around 300 patients. During the pandemic the ratio rose to over 1:400. This step-change in clinical productivity provides a virtual increase in capacity, enabling the health system to look after more patients and deliver better outcomes.

A new patient experience

As a nation we have embraced a new digital health offering; with online clinical appointments and remote monitoring becoming the norm for many. Old barriers have been overcome through necessity and clinicians and patients have realised the benefits of such innovation.

Our technology will help you drive efficiency, quality and outcomes through remotely monitoring patients at home.

Improving the quality of people's lives

Enhancing care through digital means

Freeing up clinicians' times

Driving evidence led decision making

Reducing costs

Managing patient risk

Driving a new way of working as we build back better

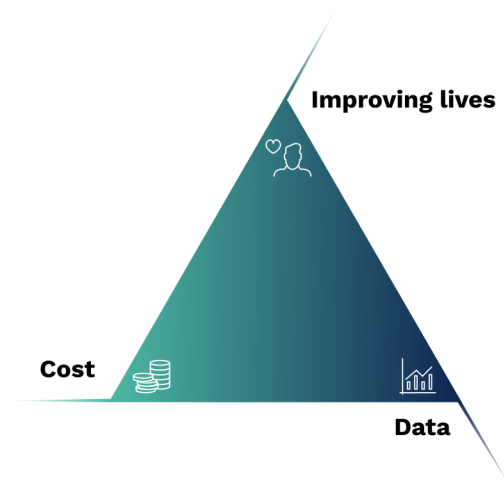

Your partnerships will no doubt be greater in number and stronger as a result of the work you have undertaken during the pandemic. Data sharing and collaboration have accelerated providing more potential for population health improvements than ever before.

Our regulatory compliant products are uniquely placed to help you capture the value of these relationships for the benefit of the Health and Social care ecosystem. Enabling insight from the micro to macro our products harvest cross sector data including cost intelligence to help understand current resource requirements but also more effective population health management in the future.

Driving sustainable outcomes

At Docobo we have a strong track record of working with partners to co-design end to end service solution. We understand the power of data in identifying current and future patient needs, we also understand budget pressures and the need to drive down costs.

Passionate about improving the quality of people's lives, we will work with you to develop service offerings which improve the wellbeing of patients; our approach to this goes beyond statutory services recognising the strength the third sector can play in addressing the underlying causes of many health conditions.

Solutions to transform out of hospital care

Monitoring patients at home

Reducing clinical workload

Population health intelligence

Residential care
