

Make earlier sense of behaviour that challenges.

Melo facilitates better decisions around behavioural management through intuitive data collection, visualisation & predictive analytics.

Last 30 days

+ Add intervention

Incidents over time

Incidents by day of week

Incident time & location

Restrictive practices

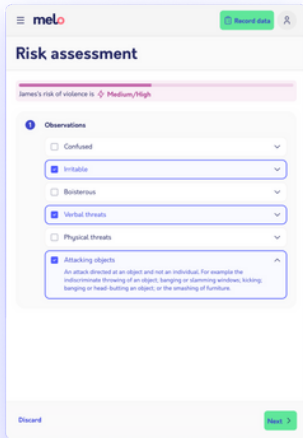

What happens immediately beforehand? (Antecedents)

What happens immediately afterwards? (Consequences)

FEATURES

Spot early signs of escalation

via our quick observations module to keep track of day-to-day changes in behaviour, mood, & patient activity (sleep, medication & pain).

Conduct smart assessments of patient behaviour

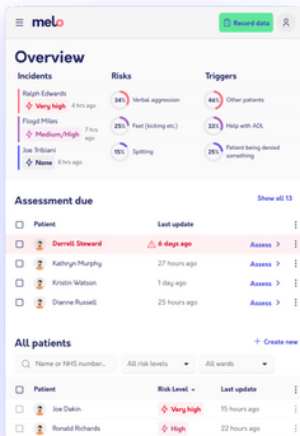

via our range of clinically validated, NICE approved risk frameworks in order to understand changes across your patient groups.

Full suite of realtime dashboards

with different levels of access control – so that individuals and teams can see what’s going on at any point in time for an individual patient, ward, or entire organisation.

Streamlined incident reporting

for when behaviour does escalate – so that you and your team have the right information at your fingertips to review and learn from when things don’t go as planned.

Effective intervention planning & library of training resources

improve team communication & learning with a centralised record of all preventative measures you are putting into place to keep your patients and staff safe, including staff access to a suite of training resources, videos, & guides.

Accessible, secure, & interoperable

works on all devices via our secure cloud environment, and will be fully DTAC compliant for launch.

We are working towards launching a patient & family support app in late 2023, containing information and resources on living with an ongoing condition.

- ✓ Safer patients & staff
- ✓ Reduced incidents & cost
- ✓ Improves decision making
- ✓ Increased understanding of patient behaviour
- ✓ Reduced stress for patient families
- ✓ Improves communication between teams
- ✓ Improves staff accountability
- ✓ Accessible, secure, & interoperable

We are excited to be working with Decently to share our specialist insight to help ensure Melo is built in the right way and ultimately helps clinicians make better decisions for our patients.

- Dr Alistair Teager, Consultant Clinical Neuropsychologist
at Salford Royal Hospital

How to get involved

Melo is currently in development, scheduled for release to pilot sites in early 2023.

User feedback

Take part in “hands-on” prototype sessions and video calls to help us refine the product.

Get started using Melo

Join our pilot scheme and start using Melo in your wards.

Spread the word

Let us know if you have any contacts, Trusts, or networks that might benefit from Melo.
