

Safe Steps - an introduction

Why falls are a problem?

- 11.6m older people (over aged 65) living in the UK - set to increase by 30% by 2030.
- Falls and fall-related injuries are a common and serious problem with 30% of over 65's and 50% of over 80's falling at least once a year.
- With the average cost of dealing with a serious fall being approx. £7.5k this problem is costing health and social care over £2.2bn per year.
- "Prevention rather than cure" - set as a national priority in 2018 Long-term plan for the NHS (Matt Hancock, Secretary of State).

What is Safe Steps?

- Secure digital risk assessment tool which provides a standardised and effective approach to falls risk management.
- Easy to setup and configure for different kinds of care organisation with advice and support built-in.
- Measures 12 key risk factors based on NICE guidelines for multifactorial risk assessment.
- Provides a personalised action plan with clear, evidence based recommendations to reduce falls risks.
- Real-time area and care home level dashboards.
- Creates a digital audit trail for reporting and CQC inspections (Health & Social Care 2008).

"Risk assessment followed by appropriate interventions for falls prevention can reduce the rate of falls by 25 - 35%"

Outcomes & evidence

- We are working with University of Manchester and NHS Accelerator to evaluate uptake, usage and desired outcomes to provide required evidence for longer term return on investment analysis.
- Currently seeking other funded pilot programmes to add to our existing cohort (live across over 100 care homes, 2000 residents).

About us

- Liverpool based health tech company.
- Voted as one of 'Top 50 Tech for Good' companies (Business Cloud).
- Currently part of 2018 NHS Accelerator programme with Health Innovation Manchester.
- Compliant with GDPR, ISO27001, Cyber-security.
