

Silhouette™

Advanced Wound Assessment and Management System

SilhouetteStar camera for easy and rapid capture of quality wound images

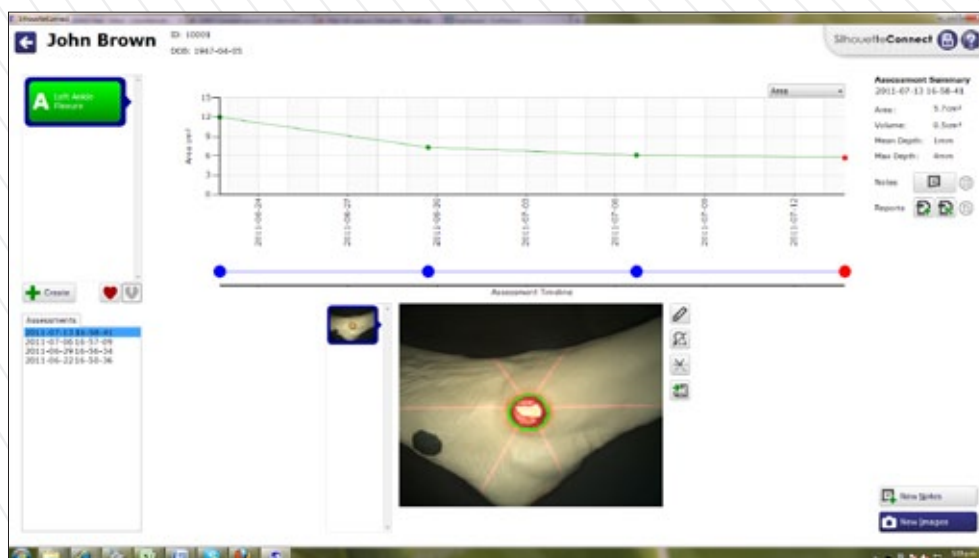

Silhouette™ – innovative technology for advanced wound assessment and wound outcomes management

Silhouette presents a significant opportunity for enhanced Patient Care and Wound Care Service development for Healthcare Provider organisations. Silhouette supports improvements in quality of clinical practice and builds capability for more effective wound outcomes management.

Available in the UK for the first time, the Silhouette™ Product Suite is a unique and effective technology designed to support advanced wound assessment and wound outcomes management of a range of wounds, including Pressure Ulcers, Leg Ulcers and Diabetic Foot Ulcers.

Silhouette supports objective, rapid and reliable wound assessment practice:

- Rapid and precise digital wound imaging, automated wound measurement and e-notes
- Wound Progress Chart generated on screen showing wound size changes over time
- Automated Silhouette Wound Assessment Report generated as part of patient record
- Centralised database for easy review, reporting and sharing of wound assessment information
- Telehealth capability with Wi-Fi and Mi-Fi enabled point-of-care device

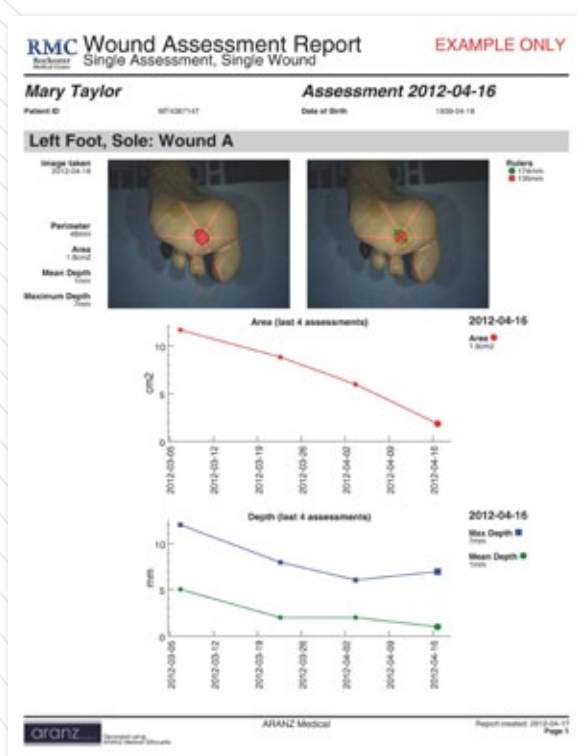

SilhouetteConnect Patient Dashboard showing Wound Progress Chart (Example Only)

Silhouette Product Highlights

SilhouetteStar+SilhouetteConnect – SilhouetteStar is a small, lightweight camera for 3D wound imaging. SilhouetteStar is controlled by SilhouetteConnect, a software application running on Windows PC. Image and measure surface area, depth and volume of a wound in less than 30 seconds and document all assessment information for a patient within minutes.

SilhouetteCentral – secure, flexible and easy to use information management database which manages and stores all information collected by SilhouetteStar+SilhouetteConnect in one central location. SilhouetteCentral can be integrated with other Hospital Information Systems.

SilhouetteCentral Reports Module – analysis and intelligence tool for population-level tracking of a range of metrics that can include patient demographics, wound healing rates and clinical trends.
